

The Difference Is In Our Products

Traceability. Responsibility. Accountability.

Look closely at our products.

They are manufactured to exact standards.
We not only provide lot control and certification but
complete support to you...our customer.

The Quality Commitment

Our commitment is to guarantee that all products from Rockford© are manufactured in strict accordance with all applicable industry standards from:

1. Industrial Fasteners Institute (IFI)
2. Society of Automotive Engineers (SAE)
3. American National Standards Institute (ANSI)

We support this commitment by performing our own tests that include metallurgical analysis, dimensional accuracy, tensile strength and hardness.

Complete traceability is assured by a Rockford© lot control number appearing on each package of through-hardened products. The lot control number is the key to tracking and verifying test records all the way back to the chemistry of the raw material. We maintain certifications in our laboratory on all through-hardened products. We warrant that our products are free from defects in material and workmanship.

Our plating facilities provide us with the ability to closely control our plating thickness and optimum corrosion resistance.

We take special care to insure that our fasteners satisfy all requirements.
